

2021-2023

Community Health Improvement Plan

Effective: January 1, 2021 to December 31, 2023

Acknowledgements

This Community Health Improvement Plan (CHIP) was developed by the Florida Department of Health in Charlotte County, FL (DOH-Charlotte) as part of the department's full community health assessment process. The CHIP was informed by the 2020 Charlotte County Community Health and Needs Assessment (CHNA) as well as insight drawn from community focus groups and community surveys.

We would like to extend our sincere thanks to the following agencies for their support, expert contributions, and partnership in the development and execution of this 3-year community health improvement plan for Charlotte County, Florida:

American Foundation for Suicide Prevention	Englewood Community Coalition
Area Agency for Aging of Southwest Florida	Family Health Centers of Southwest Florida
Aspen University	Fawcett Memorial Hospital
Bayfront Health Port Charlotte	Florida SouthWestern State College
Bayfront Health Punta Gorda	Golisano Children's Hospital of Southwest Florida
Boys and Girls Club of Charlotte County	Goodwill of Southwest Florida
Big Brothers Big Sisters	Green D.O.T.
CAB	Grove City Manor
Center for Abuse and Rape Emergencies (C.A.R.E.)	Gulf Coast Partnership
Center for Progress and Excellence	Gulfcoast South Area Health Education Center
CareerSource Southwest Florida	Habitat for Humanity
Charlotte 2-1-1	Harbour Heights Community
Charlotte Behavioral Health Care	Health Planning Council of Southwest Florida
Charlotte Community Foundation	Healthy Lee
Charlotte County Board of County Commissioners	Healthy Start
Charlotte County Community Services	JFCS of the Suncoast
Charlotte County Fire & EMS	Kids Thrive Collaborative
Charlotte County Friendship Centers	Lifelong Learning Institute
Charlotte County Government	Military Officers Association of America
Charlotte County Healthy Start Coalition	Millennium Physicians Group
Charlotte County Homeless Coalition	Peace River Elementary
Charlotte County Human Services	Pregnancy Careline
Charlotte County Medical Society	Pregnancy Solutions
Charlotte County Public Libraries	Punta Gorda Housing Authority
Charlotte County Public Schools	Sharespot
Charlotte County Sheriff's Office	Sky YMCA
Charlotte Sun News	Southwest Florida Counseling Center
Charlotte County Transit	TEAM Punta Gorda
Charlotte County Veterans Services	The Cultural Center
Children's Network of Southwest Florida	The Verandas
City of Punta Gorda	Tobacco Free Florida
Coastal Behavioral Healthcare	Trabue Woods Community
Drug Free Charlotte County	United Way of Charlotte County
Drug Free Punta Gorda	Veterans Affairs
Englewood Community Care Clinic	Virginia B. Andes Volunteer Clinic
Early Learning Coalition of Florida's Heartland, Inc	Sunshine Health

Executive Summary

As part of the Florida Department of Health in Charlotte County's (DOH-Charlotte) commitment to the continued assessment and development of community-based interventions to improve the health and well-being of all residents, DOH-Charlotte presents the following 2021-2023 Community Health Improvement Plan (CHIP) for Charlotte County, Florida. This plan was developed based on the 2020 Charlotte County Health and Needs Assessment (CHNA) completed in February 2020, in which, Charlotte County residents identified 9 strategic areas of concern within the community. These 9 strategic areas were prioritized and yielded the following top 5 focus areas:

1. Child Abuse, Neglect, and Well-Being
2. Behavioral, Social, and Emotional Health and Trauma
3. Healthcare
4. Environment
5. Aging

From these, the community chose Adverse Childhood Experiences (ACEs) as the priority area for Charlotte County from 2021-2023.

In 2010, 49.7% of Florida adults who responded to the Behavioral Risk Factors Surveillance System's (BRFSS) Adverse Childhood Experiences module reported having experienced at least one or more ACE before the age of 18. In the same year, Charlotte County was among 47 Florida counties with over 21% of their residents reporting having experienced 2 or more ACEs in childhood.

As defined by the Public Health Accreditation Board (PHAB), this CHIP plan serves as a "long-term, systematic effort to address public health problems on the basis of the results of community health assessment activities and the community health improvement process;" it provides goals, strategies, and objectives that help guide the community in their efforts to impact ACEs and maintain accountability in achieving those goals. Most importantly, the strategies and objectives outlined in the Action Plan (Appendix A) represent the dedicated work of Charlotte County agencies and their efforts to reduce ACEs among our youth and adults. Each agency objective aligns with national and/or state goals to address health equity for the improvement of early childhood and health outcomes for Charlotte County's residents.

In addition to the priority area of ACEs, DOH-Charlotte is committed to the continued surveillance and assessment of all aspects of the county's health including chronic and infectious diseases, physical and mental health, and access to care, among others.

To become involved in the work of Healthy Charlotte or to provide feedback on this report, please contact the Florida Department of Health in Charlotte County at HealthyCharlotte@flhealth.gov.

What is a Community Health Improvement Plan?

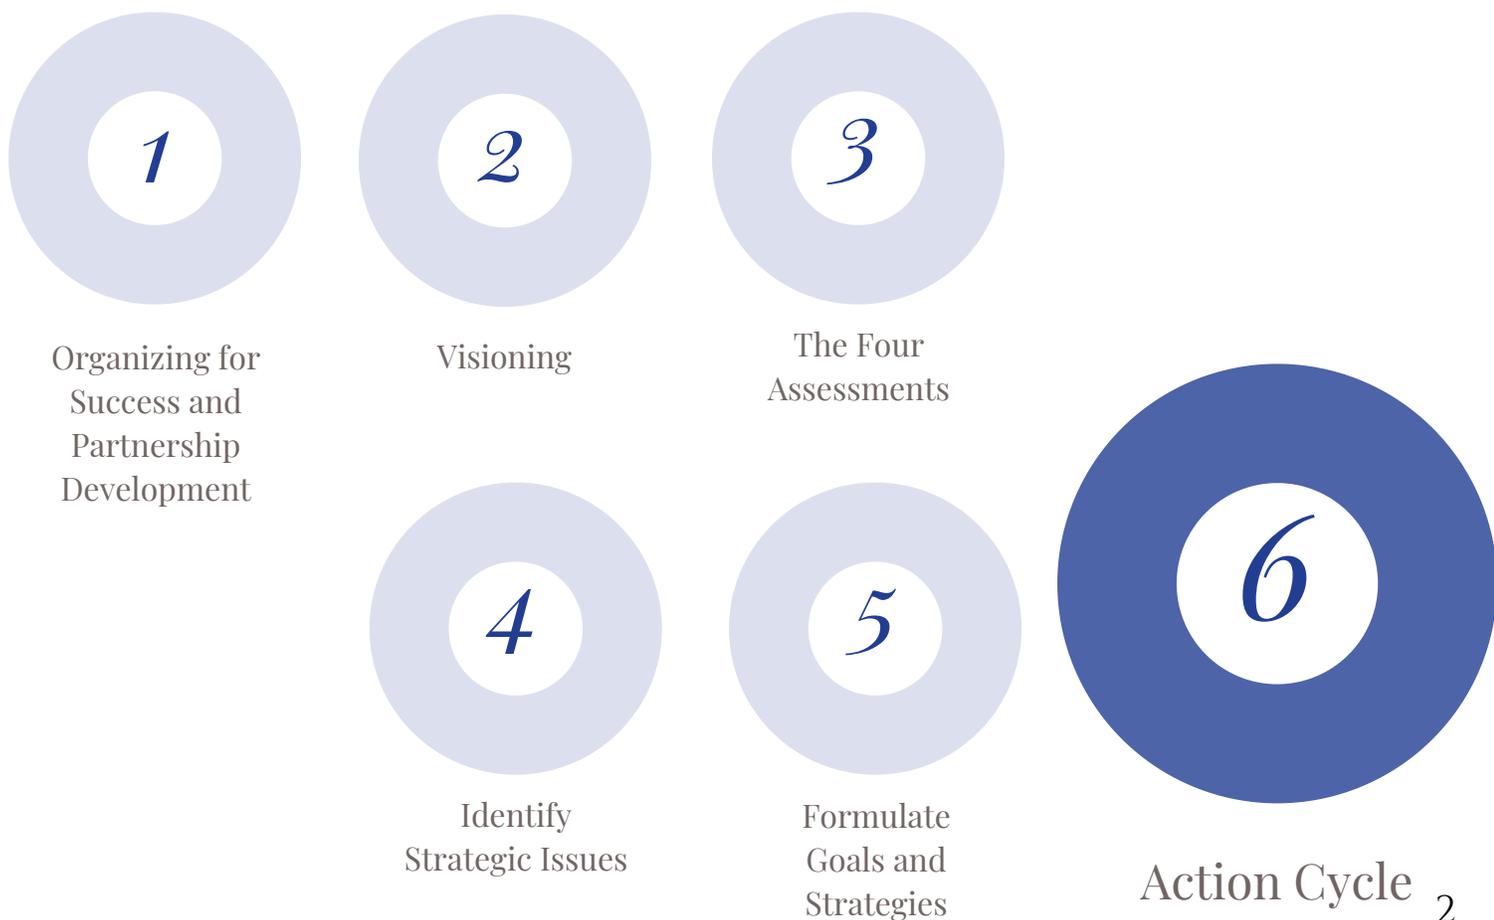

A Community Health Improvement Plan (CHIP) is the final phase in the overall Community Health Assessment (CHA) process. Though several strategic planning methods exist, DOH-Charlotte used the Mobilizing for Action through Planning and Partnerships (MAPP) method to guide the development of both the county's CHA and CHIP. The MAPP process emphasizes community-wide engagement and health equity in each of its six phases providing a framework to maximize community collaboration and ensure equitable outcomes for every population group.

Following the completion of a community health assessment, community health improvement plans establish accountable and intentional goals, strategies, and objectives that ensure the most meaningful intervention(s) to improve the public health focus identified during the CHA. Above all, CHIPs enable multisector collaborations to improve health and social outcomes for all members of a community including the marginalized and communities of concern (COC). In the MAPP process, the CHIP is phase 6: Action Cycle, where all action steps are both proactive and comprehensive in nature and provide for a continuous improvement process with shared community ownership.

The process to implement the strategies and objectives outlined within this plan is ongoing, and therefore, renders this a living document. Appendix C is the scorecard used to track our progress in implementing each outlined strategy and its respective objective, while Appendix D will be used for revisions and modifications, made along the way. The full 2021-2023 Community Health Improvement Action Plan for Charlotte County, FL can be found in Appendix A, at the end of this report.

Figure 1: The MAPP Phases

The MAPP Phases

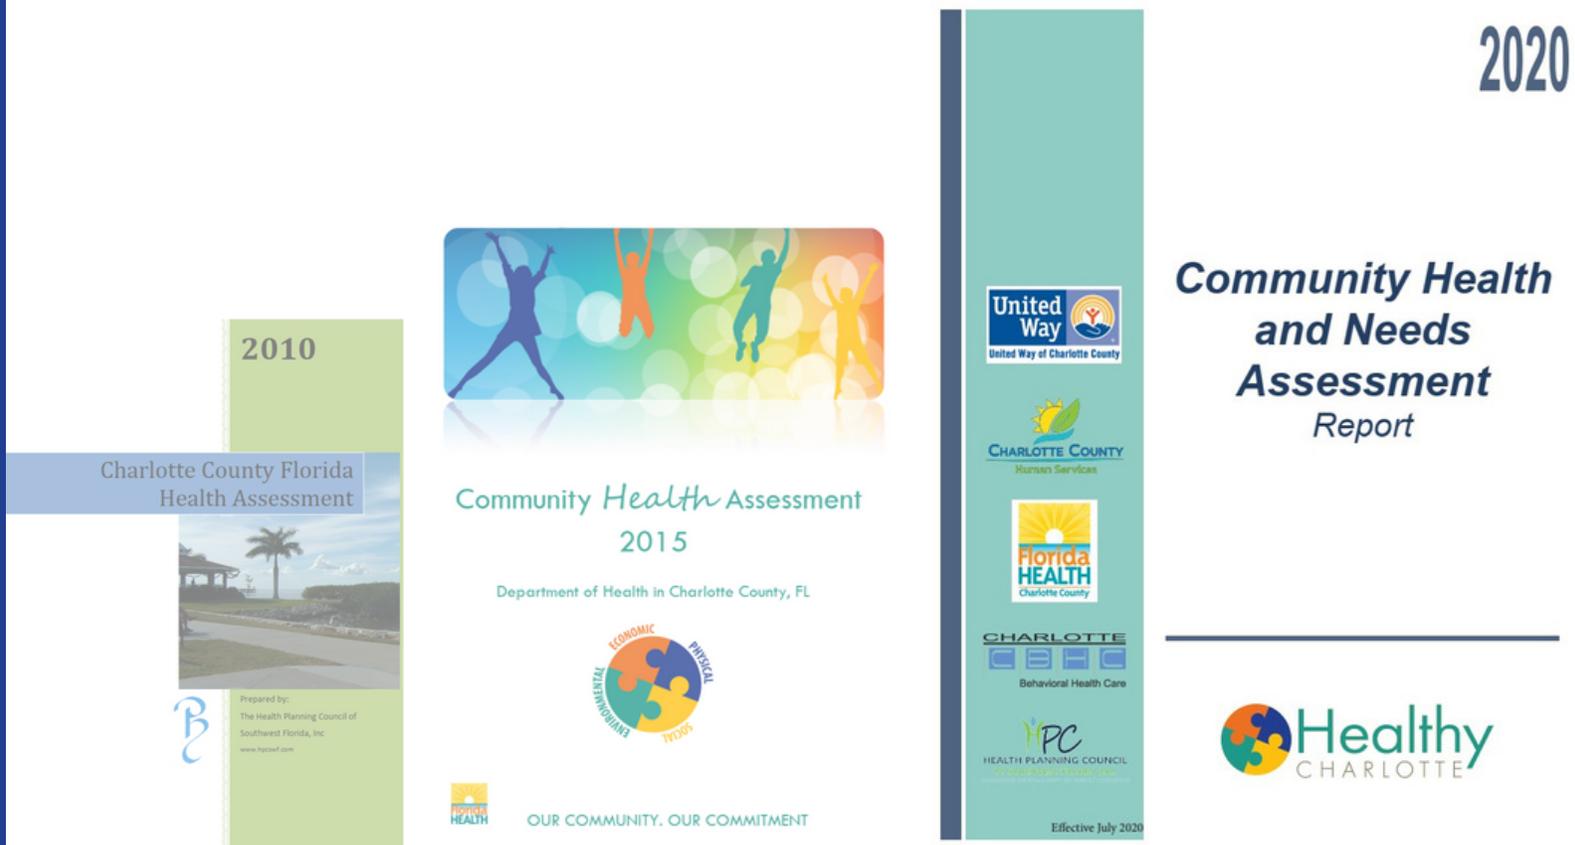

2019-2020 Community Health and Needs Assessment

The Florida Department of Health in Charlotte County conducted the 2020 Community Health and Needs Assessment (CHNA) between June 2019-December 2020 in partnership with Charlotte County Human Services (CCHS), Charlotte Behavioral Health Care (CBHC), United Way of Charlotte County (UWCC), and the Health Planning Council of Southwest Florida (HPCSWFL). The CHNA was guided by the MAPP framework throughout its 7-month development process, with Charlotte County residents and local agency and business representatives meeting to complete: 4 assessments, 1 vision, 1 community-wide survey with 1,367 respondents, 7 focus groups, and the prioritization of strategic issues.

The full 2020 CHNA Report can be accessed on the Florida Department of Health in Charlotte County website and will remain in effect through June 30, 2025, with annual updates to follow, accordingly. Additionally, the CHNA report has been used to inform the development of this Community Health Improvement Plan and will also provide valuable insight to local agencies in their decision-making processes in the community for years to come.

For more information on the 2020 Charlotte County Health and Needs Assessment or to obtain a copy please visit charlotte.floridahealth.gov/programs-and-services/community-health-planning-and-statistics/community-health-status/ or www.HealthyCharlotteCounty.org.

Prioritization Process

In early December 2019, community members met to identify the most pressing health and needs concerns within Charlotte County, FL. There were an initial 10 strategic areas:

1. Affordable Housing
2. Behavioral, Social, and Emotional Health
3. Cost of Living & Economic Wellness
4. Child Abuse and Neglect
5. Opportunities and Needs for Young Working Population
6. Transportation
7. Trauma-Informed Care
8. Healthcare Costs
9. Healthcare Workforce
10. Sidewalks and Streetlights

The core group of partners tasked with leading the overall development process for the community health assessment met to consolidate the aforementioned strategic areas and create datasheets to help inform the community's decisions during the final prioritization process. The strategic issues were ranked by community members using three criteria: impact, feasibility, and assets. The final top five priority areas were:

1. Child Abuse, Neglect & Well-Being
2. Behavioral, Social & Emotional Health and Trauma
3. Healthcare
4. Environment
5. Aging

Income Profile

Economic well-being is essential to physical, emotional, and mental health. The consequences of insufficient income for a household may vary in degrees, but ultimately, it affects family and community stability and health. The median household income for Charlotte County is \$49,225* and the per capita income is \$30,528*^.

ALICE, which stands for *Asset, Limited, Income Constrained, Employed*, represents households that earn income above the Federal Poverty Level (FPL) but still less than the minimum income necessary to live in their region. As a result, ALICE provides a much more accurate understanding of economic well-being than does the FPL, which does not take into account regional variations in cost of living, taxes, and salaries. In Charlotte County, FL, 11% of households are in poverty and 34% are considered ALICE. This means that 34% of Charlotte County households are “barely making it;” they struggle to afford the everyday necessities, most likely have no savings, and are one emergency or accident away from poverty or even homelessness.

Table 1: Charlotte County, FL Income Snapshot

The Social Determinants of Health in Charlotte County, Florida

The Social Determinants of Health (SDOH) are social indicators traditionally placed within five main domains, each representative of the environments in which people "live, work, and play." The SDOH impact human health in more significant ways than traditional health measures. Therefore, they are now known to be a major contributor to overall health and life outcomes for individuals, while speaking to the wide-ranging health disparities and inequities experienced by vulnerable populations around the world.

Because the SDOH are the societal and environmental factors that determine health, they are interlinked with early childhood adversity and life opportunity. Understanding their impact will improve childhood outcomes and ensure a targeted and robust response to mitigating early childhood health disparities.

Economic Stability

The foundation for health and well-being starts with stable employment and housing security. The Fourth National Incidence Study of Child Abuse and Neglect (NIS-4) reports national trends in all categories and severities of child Harm Standard Maltreatment. The report also explores the differences in incidence rates of child maltreatment in relation to family and household characteristics.

Parent employment status, household socio-economic status (SES), as well as family structure were all related to the incidence of child maltreatment; specifically, in all cases of child maltreatment, "children with no parent in the labor force and those with an unemployed parent were at significantly higher risk of Harm Standard maltreatment" when compared to children whose parents were in the labor force or who were employed. Additionally, in all categories of neglect, children with employed parents had consistently less incidence rates of physical, emotional, and educational neglect as compared to those with unemployed parents.

Children in families with low socio-economic status are at a significantly greater risk for all forms of maltreatment, overall, than children who are from higher levels of socio-economic status. These findings from the NIS-4 not only provide national child abuse and neglect definitional standards, but also reflect trends at local community levels, which serve as the source for all NIS-4 reported data. As a result, the relationship between household characteristics and socio-economic status and child abuse and neglect detailed in the NIS-4 study holds true for local communities such as Charlotte County, FL households and families with child maltreatment cases.

Eleven percent of Charlotte County households are in poverty and 35% are cost-burdened.* State-wide, communities experienced record low unemployment rates until March 2020, which marked the beginning of the economic downturn caused by the Corona Virus 2019 pandemic. Unemployment rates experienced a dramatic increase, the highest being in April 2020 at 13.8%. As of September 2020, unemployment in our region has seen a steady decline and remains above 5%. Each of these economic factors contribute to higher health risks, poor health outcomes, and exacerbate health inequities already prevalent in vulnerable populations. In 2019, the Charlotte County Board of County Commissioners set affordable housing as one of the county's BOLD goals. Specifically, the county has made the commitment to add 3,650 affordable housing units to the community by 2024. This bold new policy in the county's strategic plan will ensure accessibility to safe and stable housing while reducing health inequity within the community.

Education Access and Quality

Charlotte county's graduation rate is 86.4% and 90.3% of current residents have a high school diploma or higher. Of the 20 schools in the county, two are charter, twelve are Title I, and 16 have 50% or more students who are considered economically disadvantaged, while for seven schools, that measure represents 100% of their student population.

Access to high quality education helps lay the foundation for healthier and longer lives, while also countering the effects of generational trauma and poverty. Through education, children and adults alike, are equipped with life skills and community connections that increase their capacity to thrive through a stable social environment. In Charlotte County, FL, schools also function as a bridge to various community initiatives including after school programs that provide additional support and mentorship to all youth including those from low SES households and at-risk youth.

Healthcare Access and Quality

Most recent numbers show that Charlotte County has improved on several indicators which assess overall access to care in a community. From 2013 to 2016, the percentage of adults who could not see a physician in the past year due to cost decreased from 16.5% to 11.3% and has remained below the state percentage. Similarly, in the same years, the percentage of adults who had a personal doctor increased from 78.8% to 84.4%. Since 2012, the percentage of the population with health insurance has continued to steadily increase and is 89% as of 2018. Access to adequate and specialized healthcare through insurance and affordable costs is essential to health and well-being as they promote preventative care and alleviate the financial burden of care in later life.

Neighborhood and Built Environment

The environment in which we live can either promote health and safety or contribute to poor health and become a breeding ground for violence and toxic stress. Health inequity is often times more clearly seen and understood through differences in neighborhoods and built environments because of the inconsistency in the distribution of community resources, such as, schools, farmer's markets, clinics, restaurants, and bike/walk pathways.

Charlotte County's built environment remains a major challenge for its residents. With no robust public transportation system and limited pathways to access community resources by bike or on foot, the county is considered car-dependent which leaves zero-car and low-income households at a severe disadvantage.

The Charlotte County-Punta Gorda Metropolitan Planning organization (MPO) has created the Charlotte Transportation Plan (CTP), which is the Long Range Transportation Plan for Charlotte County (LRTP) through 2040 with the goal of "identifying [the community's] future transportation needs [to] prioritize projects that meet those needs in a cost effective way."

Social and Community Context

Not only are healthy social and community relationships one of the five domains of the social determinants of health, but they are also one of the five protective factors for preventing child abuse and neglect. The appropriate social support in times of need are vital to maintaining health and well-being and can oftentimes offset the negative impacts and consequences caused by deficits in the other four domains of the SDOH. The primary way to build resilience in children is through the presence of one consistent, stable, and caring adult. Positive role models, family supports, and community relationships foster resilience and serve as a buffer when situations of toxic stress arise in anyone's life. Healthy social connections challenge traumatic experiences and allow individuals to resist and recover, negating the long-term physiological effects of adverse experiences.

CHARLOTTE COUNTY HEALTH RANKINGS

HEALTH OUTCOMES

28

Overall health outcomes are measured by length of life (through YPLL) and quality of life as reported by self-

HEALTH FACTORS

11

The overall health factors ranking represents a county's combined score for health behaviors, clinical care, social and economic factors, and physical environment.

- Drinking Water Violations
- Severe Housing Problems
- Driving Alone to Work
- Long Commute- driving alone

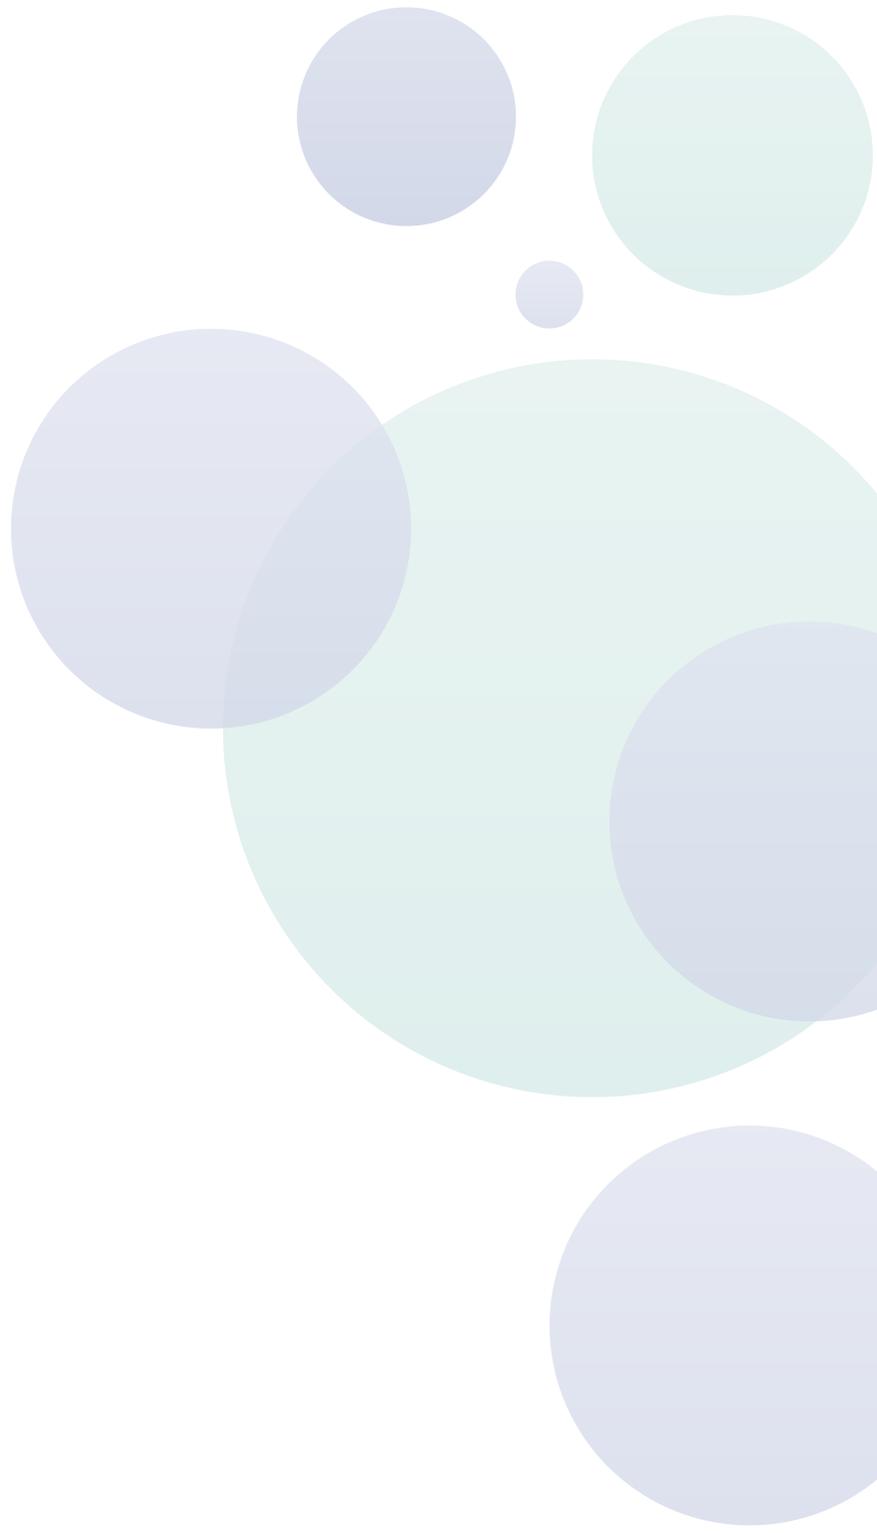

^All rankings represent county standing out of 67.

*3-year average trend data (2004-2016) indicate that Charlotte County is getting worse in rates of adult obesity.

**Trend data (2008-2017) indicate that Charlotte County is improving in percent uninsured and for population to Dentist ratio (2010-2018). Trend data (2010-2017) indicate that Charlotte County is improving for Population to Primary Care Physician ratio.

***Trend data (2002-2018) indicate that Charlotte County is getting worse for percent children in poverty.

Priority 1: Adverse Childhood Experiences

Adverse Childhood Experiences (ACEs)

Adverse Childhood Experiences (ACEs) are traumatic events that a person experiences before the age of 18. The term '*adverse childhood experience*' was coined by Dr. Robert Anda and Dr. Vincent Felitti in their 1998 article entitled "Relationship of childhood abuse and household dysfunction to many of the leading causes of death in adults. The Adverse Childhood Experiences (ACE) Study."

Referred to as the "original" ACE study, their paper established the relationship between childhood exposure to toxic stress through traumatic experiences and the development of multiple health risk factors that lead to morbidity and early death in adulthood. Since then, countless studies have been published which continue to support, through deeper insights, what Drs. Anda and Felitti's research discovered, including the multilayered depth of ACEs science.

ACEs vary in scope and impact, however, their effect on the human body during its most important stages of development is consistent and now clear. Unaddressed trauma and toxic stress lead to developmental delays for children, disability, chronic illness, early death, and astronomical economic loss to communities; therefore, the importance of a community-wide effort to challenge one of the most under recognized public health crises of our lifetime cannot be overstated.

Traditionally, ACEs are placed into three categories: abuse, neglect, and household dysfunction. Subcategories for each ACE include but are not limited to emotional, physical neglect and abuse as well as sexual abuse; parental divorce or death, household substance abuse, domestic violence, and incarcerated relative.

Figure 5: The ACEs Pyramid

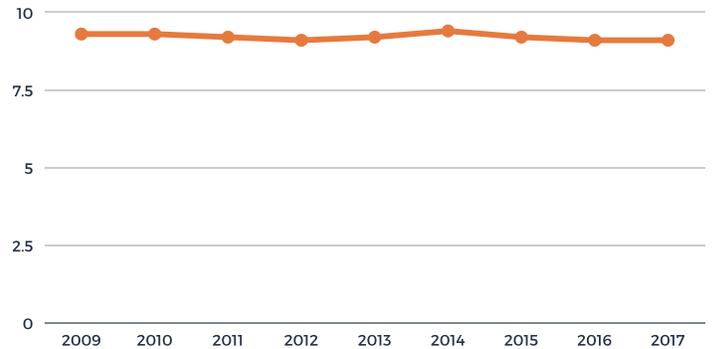

Adapted from CDC-Kaiser Permanente ACE Study Violence Prevention Injury Center's "Mechanisms by which Adverse Childhood Experiences Influence Health and Well-Being Throughout the Lifespan."

Abuse

NATIONAL

Nationally, child abuse and neglect rates continue to remain steady with little change since 2009. As of 2017, the national rate of CAN is 9.1.

Figure 6: National Child Abuse and Neglect (CAN) Rates, 2009-2017

FLORIDA

In 2009, Florida had 72,949 verified child maltreatment cases. In 2019, the state reported 50,638 verified cases of child maltreatment, representing a 31% decrease over a decade.

CHARLOTTE COUNTY

In 2009, Charlotte County reported 363 verified cases of child maltreatment. In 2019, the county had 744 verified cases of child maltreatment, representing a 105% increase.

Figure 7: Verified Cases of Child maltreatment Charlotte County, FL 2005-2020

3RD

oldest county in the United States.

105%

increase in verified child maltreatment cases from 2009 to 2019.

2ND

ranked county out of 67 for children experiencing child abuse.

<1

children under one have the highest rate of overall child maltreatment, including abuse and neglect.*

3/5

nationally, over 60% of child maltreatment victims suffered neglect only.*

8.1

per 10,000 children in Charlotte County are victims of neglect compared to the state rate of 3.0 per 10,000 children.^

Neglect

NATIONAL

The Child Abuse Prevention and Treatment Act (CAPTA) defines neglect as: *"Any recent...failure to act on the part of a parent or caretaker which results in death, serious physical or emotional harm, sexual abuse or exploitation; or failure to act which presents an imminent risk of serious harm."**

Nationally, child neglect is the highest reported and substantiated form of child maltreatment. In 2018, neglect represented 61% of total unique victim maltreatment.

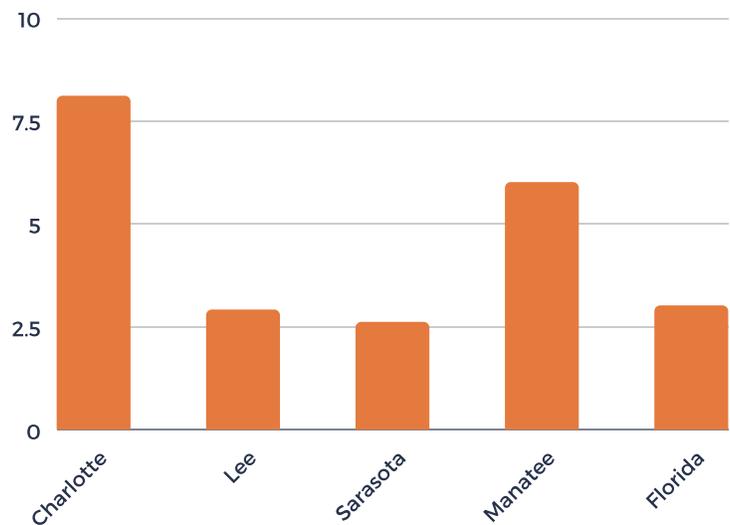

FLORIDA

The state rate for victim reports of neglect is 3.0 per 10,000 children compared to Charlotte County at 8.1 per 10,000 children.

CHARLOTTE COUNTY

Charlotte County, FL ranks 3rd for the rate of child victims of neglect in the state. Though Charlotte is the 2nd oldest county, it still has higher rates of child neglect than its neighboring counties.

Figure 8: Rates of child neglect by county vs. Florida

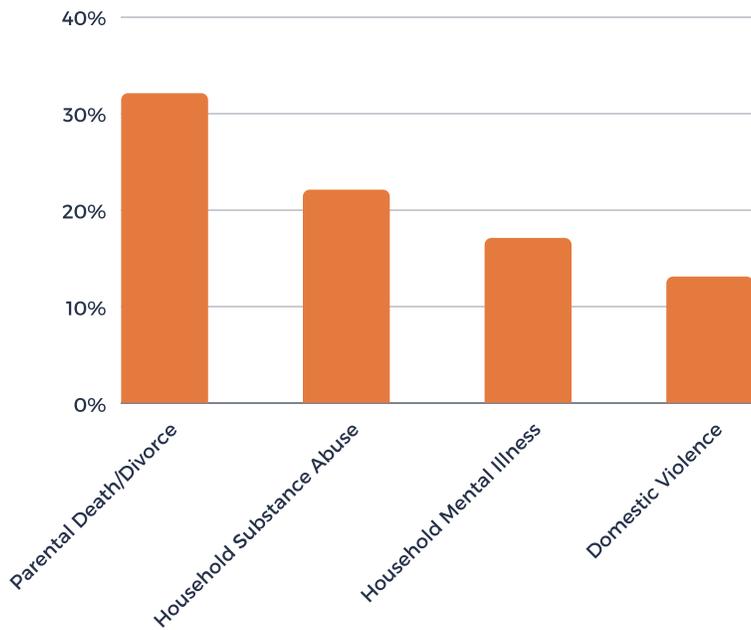

*U.S. Department of Health & Human Services, Administration for Children and Families, Administration on Children, Youth and Families, Children's Bureau. (2020). Child Maltreatment 2018. Available from <https://www.acf.hhs.gov/cb/research-data-technology/statistics-research/child-maltreatment>.

**The Child Abuse Prevention and Treatment Act (CAPTA), (P.L. 100-294)

^Data from October 2018 through September 2019.

Household Dysfunction

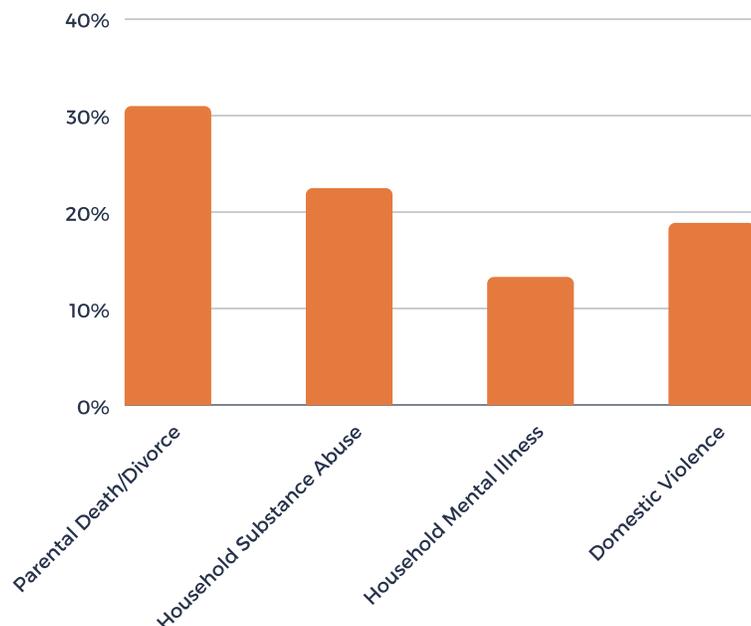

Figure 9: Rates of Household Dysfunction, Charlotte County, 2010*

OVER THE PAST DECADE

According to results from the Behavioral Factors Surveillance System (BRFSS) 2010 Report, **parental death or divorce** was the most prevalent household challenge faced by Charlotte County residents, at **32%**.

Figure 10: Rates of Household Dysfunction, Florida, 2010*

FLORIDA

Roughly 0.5% of K-12 students in the State of Florida have an emotional/behavioral disability, compared to 1.6% of Charlotte County K-12 students.**

CHARLOTTE COUNTY

Measures of household dysfunction indicate that Charlotte County adults have experienced household challenges at a higher percentage than adults in the state, overall.*

32%

of Charlotte County residents have experienced parental death or divorce.

22%

of Charlotte County residents were brought up in a home where they were exposed to substance abuse.

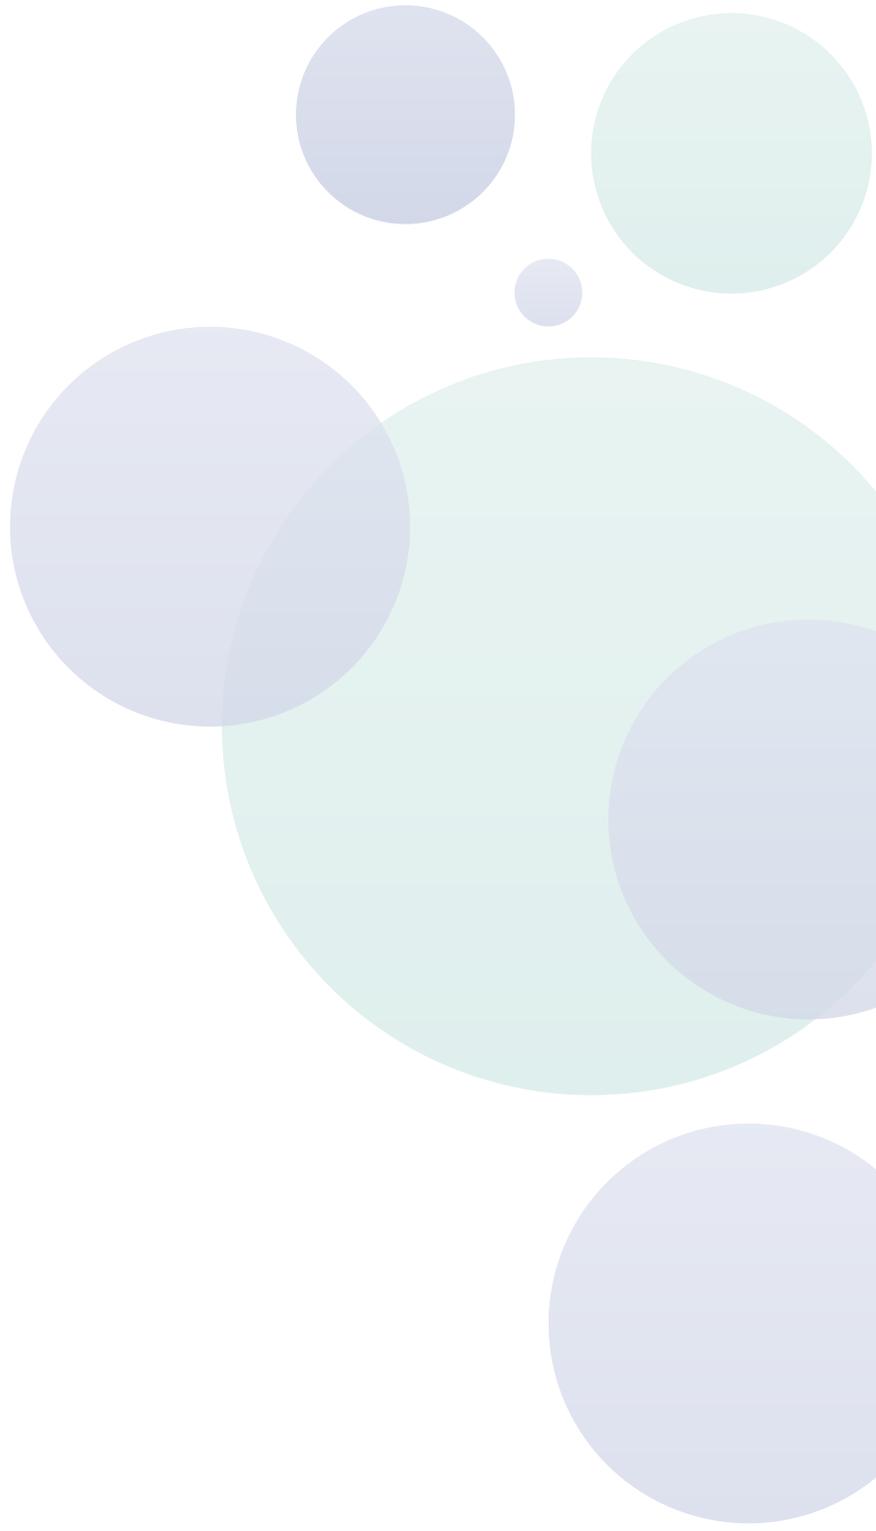

13%

of Charlotte County adults witnessed or were victims of domestic violence while growing up.

*2010 Florida Behavioral Risk Factors Surveillance System Report, State-Added Module: Adverse Childhood Experiences/CMS

**Florida Department of Health Division of Public Health Statistics & Performance Management's Community Health Assessment Resource Tool Set (FLHealthCHARTS).

Health-Related Behaviors

Alcoholism

Research does not delineate the precise pathways between ACEs and various chronic diseases; however, countless research studies indicate a strong association between ACEs and the increased risk for adopting known chronic disease risk factors which may lead to the development of various maladies in later life.

For example, though ACEs do not directly cause liver disease, the most common causes of liver disease are Hepatitis C infection and long-term alcohol abuse. Alcohol abuse is often adopted as an unhealthy coping mechanism from toxic stress or as a behavior demonstrated to them in childhood. As a result, long-term alcohol abuse often times leads to Cirrhosis (chronic liver disease) if the underlying conditions causing the abuse are not treated.

CHRONIC ALCOHOL ABUSE

is a common cause of liver disease and liver failure.

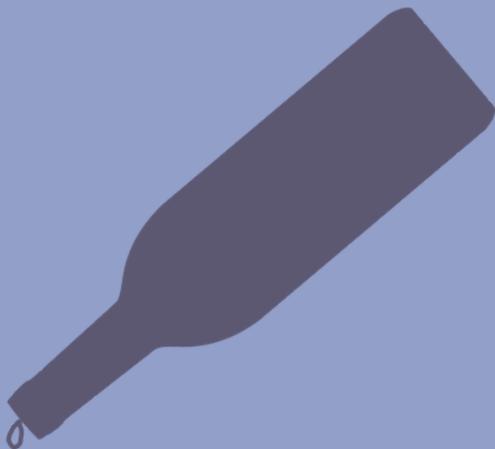

Figure 11: Adults who engage in heavy or binge drinking
Charlotte vs. Florida

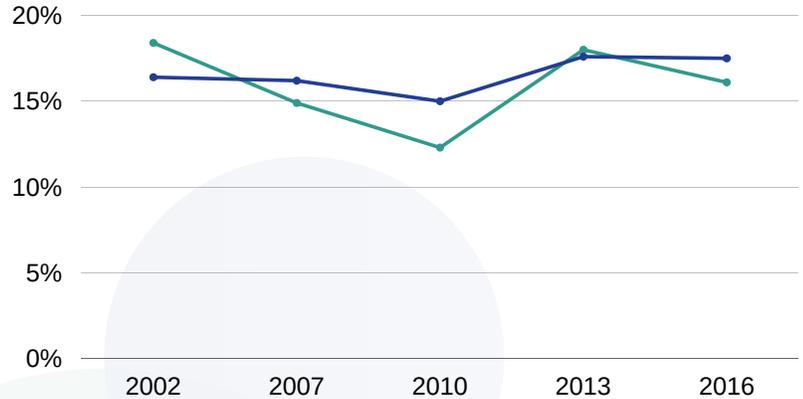

Figure 12: Chronic Liver Disease and Cirrhosis Age-Adjusted Death Rate,
Single Year Rates
Charlotte vs. Florida

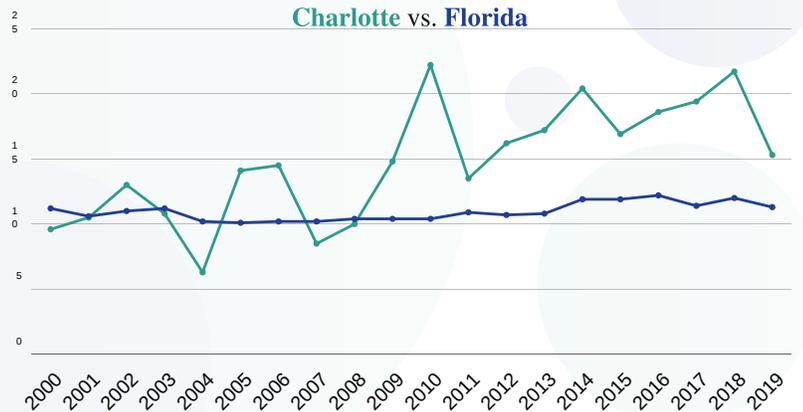

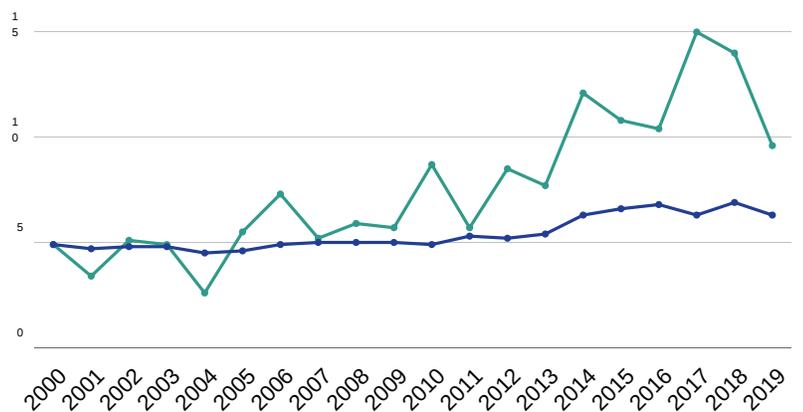

Figure 13: Alcoholic Liver Disease Deaths

*Per 100,000 population

^Anda, Robert & Whitfield, Charles & Felitti, Vincent & Chapman, Daniel & Edwards, Valerie & Dube, Shanta & Williamson, David. (2002). Adverse Childhood Experiences, Alcoholic Parents, and Later Risk of Alcoholism and Depression. Psychiatric services (Washington, D.C.). 53. 1001-9. 10.1176/appi.ps.53.8.1001.

ALCOHOL

#1

most used substance by Charlotte County teens.

The percentage of adults who report that they engage in heavy or binge drinking has fluctuated above and below the state rate since 2002, and as of 2016, is below the state rate at 16.1% vs. 17.5%. Unfortunately, Charlotte County's alcoholic liver disease deaths rate and chronic liver disease and cirrhosis age-adjusted death rate have both remained consistently above the state rate since 2008 and 2009, respectively. Between 2017 and 2019, alcoholic liver disease deaths in Charlotte County experienced a 22% decrease from a rate of 15* in 2017 to 9.6* in 2019.

Anda et al., found that children who are raised in a home where there is alcohol abuse are more likely to report having experienced adverse childhood events. Their study also found that "the prevalence of alcoholism was higher among persons who reported parental alcohol abuse."[^]

In line with the adult rates, the percentage of middle and high school students who report binge drinking and who have used alcohol in the past 30 days continues to decline in Charlotte County. According to the Drug Free Charlotte County Community Assessment, "alcohol is the number one most used substance by Charlotte County teens" and remains the first substance to which students in the county are introduced.[^] Fortunately, the 2018 Teens Norms Survey (TeeNS) reported that the age of onset of alcohol use for Charlotte County teens fell slightly from 11.3 to 11.2.

Figure 14: Middle school students who have used alcohol in past 30 days
Charlotte* vs. Florida

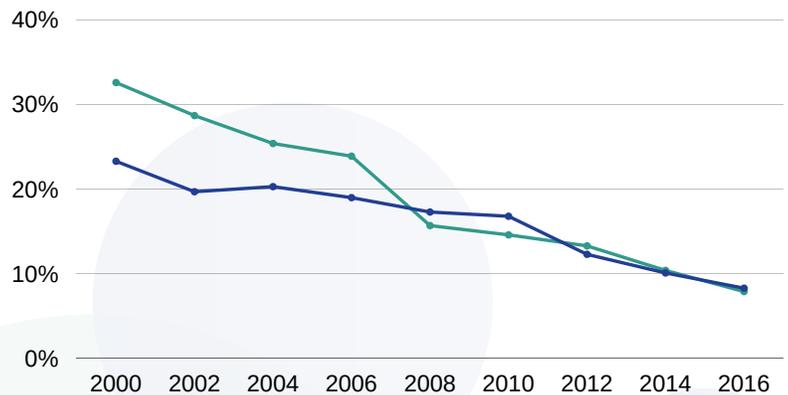

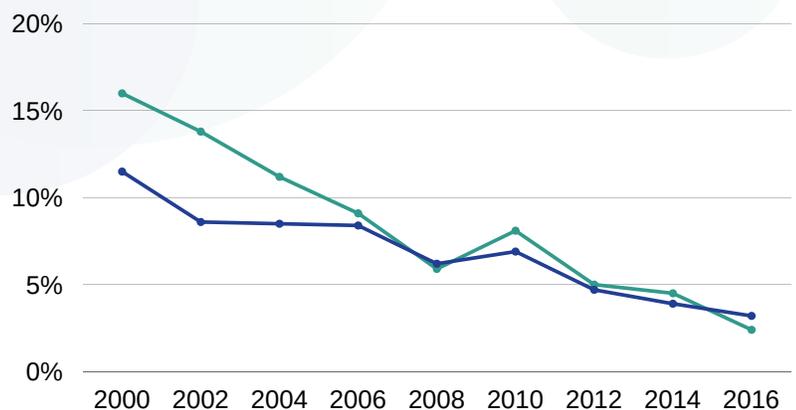

Figure 15: Middle school students reporting binge drinking
Charlotte* vs. Florida

*County percentages are not available for odd years.

[^]Drug Free Charlotte County Community Assessment, 2020.

Unfortunately, parents are the number one source for Charlotte County middle and high schoolers who obtain alcohol, representing roughly 34% and 28% of all sources, respectively.

As with many health risk behaviors, alcohol is adopted as a coping mechanism. The current downward trends in Charlotte County teen usage of alcohol are encouraging and must continue to ensure a safe, drug free, and resilient community.

PARENTS

#1

are the number one source through which Charlotte County teens obtain alcohol.

Tobacco Use and Exposure

Figure 18: Adults who are current smokers*
Charlotte vs. Florida

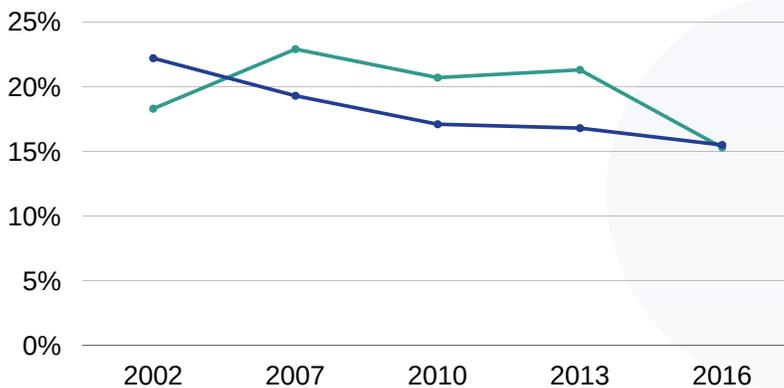

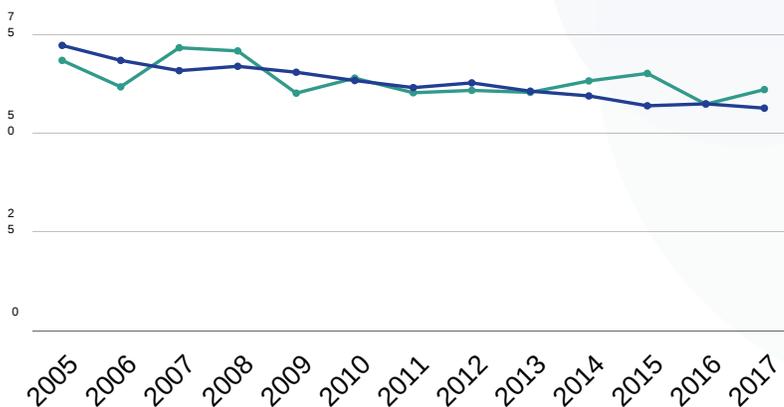

Figure 19: Lung Cancer Incidence
Charlotte vs. Florida

Health behaviors in early childhood and adolescence are an essential link for determining positive or negative health outcomes and overall quality of life into adulthood. Accordingly, early childhood experiences, including socioeconomic status, as well as social, and physical environment contribute to the life habits that children and adolescents adopt to either cope or thrive in their communities.

Tobacco use and exposure undermine health and the ability to maintain healthy lifestyles. From 2013 to 2016, the number of adults smokers in Charlotte County decreased from 21.3% to 15.3%, while lung cancer incidence experienced an increase in the same time period.

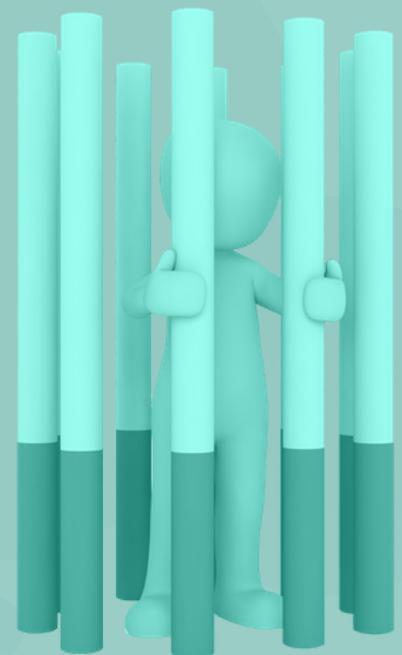

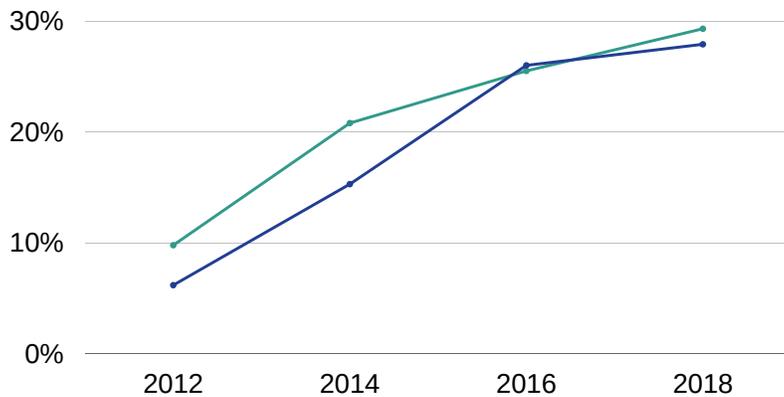

Figure 20: Percent of students who have ever used an electronic vapor product

of Charlotte County middle and high schoolers have ever used an electronic vapor product.

Figure 21: Percent of students who are current cigarette smokers (smoked in the past 30 days)
Charlotte vs Florida

Though the percent of students who are current cigarette smokers and the percent of students who began using cigarettes before the age of 13 have continued to steadily decrease in the county, the percent of students who have ever used an electronic vapor product in both the state and Charlotte County has seen a dramatic increase over the past seven years (2012-2018). From 2012 to 2014, alone, the State of Florida and Charlotte County both saw a 147% and 112% increase in the reported number of students who have ever used a vapor product, respectively. As of 2018, 29.3% of Charlotte County students and 27.9% of Florida students, overall, have ever used a vapor product.

Figure 23: Drug Overdose Deaths*[^]
Charlotte County, FL, 2015-2019

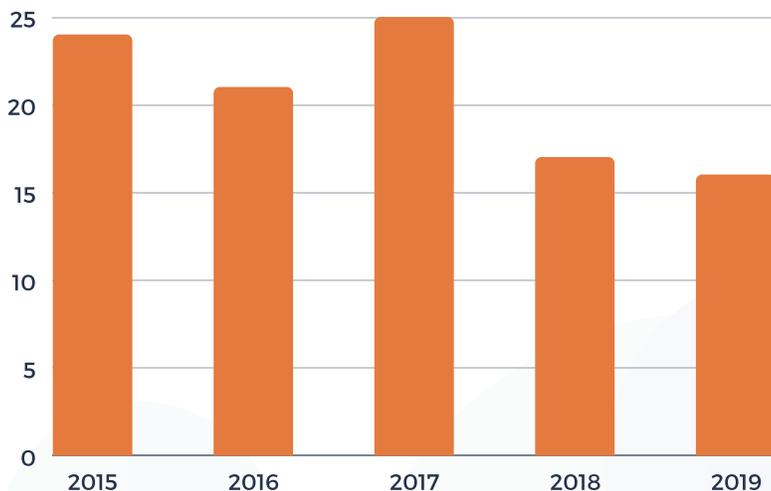

Figure 24: All drug non-fatal overdose hospitalizations
Charlotte County, FL, 2015-2019

In 2015, Charlotte County reported 24 drug overdose deaths, including opioids. This number decreased by three the following year; however, in 2017, the county reported 25 drug overdose deaths. For 2018, 17 total drug overdose deaths were reported, with provisional data showing 16 drug overdose deaths for the first 6 months of 2019, alone.

16

drug overdose deaths in Charlotte County for the first 6 months of 2019,

*Includes opioid deaths
[^]2019 counts are for Jan-Jun 2019.

50.6%

of Charlotte County adults are inactive or insufficiently active.

Unlike alcohol and tobacco use, physical activity is a positive health behavior for individuals to adopt and is known to reduce the negative impacts of toxic stress. Conversely, limited or no physical activity allow the effects of ACEs and toxic stress to have a greater detrimental impact on individual health. Between 2007 and 2016, the percentage of Charlotte County adults who were sedentary increased 14%. Troubling still, 50.6% of Charlotte County adults report being inactive or insufficiently active with men more so than woman at 53.4% vs. 48.8% for females.

Similarly, proper nutrition mitigates the negative effects of ACEs and toxic stress while poor eating habits and nutritional deficiencies exacerbate their impact, particularly during vital brain and body developmental periods in adolescence.

Promoting healthy eating habits while encouraging children and adults, alike, to increase their physical activities will provide an additional approach to combatting ACEs in our community.

Physical Activity & Nutrition

Appendix A: Action Plan

The following action plan has been adapted from the Centers for Disease Control and Prevention (CDC), Division of Violence Prevention's 2019 report, *Preventing Adverse Childhood Experiences (ACEs): Leveraging the Best Available Evidence*.

This action plan represents the collective response of Healthy Charlotte partner agencies to addressing Adverse Childhood Experiences in Charlotte County, FL.

Recent data on child abuse and neglect, opioid/substance abuse, and socioeconomic measures, demonstrate the need for our community's targeted efforts to implement system-level change across all sectors of community services. Healthy Charlotte partner agencies have committed themselves to structural change at both the individual and agency-level to ensure that ACEs and their long-term effects are not left unchallenged in any segment of our community.

For more information on any of the programs or agencies highlighted in the this appendix, please contact: HealthyCharlotte@flhealth.gov.

 Preventing ACEs	
Strategy	Approach
Strengthen economic supports to families	<ul style="list-style-type: none"> • Strengthening household financial security • Family-friendly work policies
Promote social norms that protect against violence and adversity	<ul style="list-style-type: none"> • Public education campaigns • Legislative approaches to reduce corporal punishment • Bystander approaches • Men and boys as allies in prevention
Ensure a strong start for children	<ul style="list-style-type: none"> • Early childhood home visitation • High-quality child care • Preschool enrichment with family engagement
Teach skills	<ul style="list-style-type: none"> • Social-emotional learning • Safe dating and healthy relationship skill programs • Parenting skills and family relationship approaches
Connect youth to caring adults and activities	<ul style="list-style-type: none"> • Mentoring programs • After-school programs
Intervene to lessen immediate and long-term harms	<ul style="list-style-type: none"> • Enhanced primary care • Victim-centered services • Treatment to lessen the harms of ACEs • Treatment to prevent problem behavior and future involvement in violence • Family-centered treatment for substance use disorders
